SE Funktionsprov

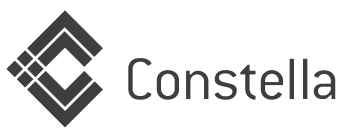

Efter installation ska komplett funktionsprov med full last genomföras:

- * Provkör bänklyftaren upp och ner hela vägen till respektive ändläge. Kontrollera att bänken löper fritt utan hinder, klämrisker och missljud. Kontrollera att den står kvar i nedre respektive övre läge.
- * Kontrollera att inga kablar eller slangar kommer i kläm och att de är fixerade.
- * Kör bänken nedåt och kontrollera att klämlisten under bänkens framkant fungerar genom att trycka lätt på den. Bänken ska stanna omedelbart och vända uppåt för att frigge utrymme.

EN Functional test

After installation a complete functional test with full load shall be made:

- * Run the worktop lift unit down and up all the way to respectively end position and make the following checks:
Check that it moves freely, without hindrance and jarring sounds.
Check that it stays in the lowest resp. top positions.
- * Check that no cables or hoses are jammed and that they are fixed.
- * Lower the worktop lift unit and check that the security strip under the aluminium frame works properly, by means of pressing lightly onto it. The worktop lift shall stop immediately.
